

TUNG SOY STAND OIL

DESCRIPTION:

Consists of a copolymer of soy oils and Tung oil, combined in optimal proportions to provide an excellent quality. Good viscosity; low acidity; low yellowing level, both in exposure and storage; and a defect-free film, that does not wrinkle nor discolors. The type of process utilized for its obtention assures a proper drying, free of surface tackiness; and low acidity, which reduces the dry film's sensitivity in contact with water.

SPECIFICATIONS	
25 C° Gardner viscosity	Y-Z
Solids	100%
Acidity index	< 3
Color	Hellimage 5 – 7
Aspect	Translucid

APPLICATIONS:

-Vehicle for wood varnishes, either combined or pure. It acts as an impregnating agent, due to its penetration, sealing, and water-repealing capabilities. The drying process can be accelerated with the addition of drying agents.

-Plasticizer for petroleum resin. Its low acidity makes it appropriate for aluminum enamels.

Analyzed samples meet the specifications.
